Human Body Systems
Junior Year - Biomedical Science

Course Overview:
This course provides an introduction to the interactions of the human body systems through hands-on activities, problem solving, and real-world medical cases.

Goals and Objectives:
Students explore the body’s identity, communication, power, movement, protection, and homeostasis.

Project Highlights:
- Building organs on a skeletal Manikin
- Role-playing
- Dissecting and analyzing samples
- Electrophoresis
- Range of Motion
- Urine Analysis
